Forescout counteract training guide

Malwarebytes provides a plug-in that includes Malwarebytes Breach Remediation in Forescout CounterACT® security platform. This plugin allows the deployment of Malwarebytes Breach Remediation and then executes malwarebytes scanning at endpoints managed by Forescout CounterACT. Forescout, a multigraduous automated network security platform, gives you real-time visibility and control over everything connected to the network; all devices, all operating systems, all applications, all users. A powerful counteract assessment tool monitors each device, i.e. the operating system and version, MAC & IP, whether it's on the network for a few minutes or all day. Forescout also acts as an integration tool (using its ControlFabric technology) for your AV, next-generation firewall and IDS products, enabling automated interoperability as key security tools to share information to provide a complete network defense strategy. Forescout CounterACT is easy to install because it does not require any software, no agents, no hardware upgrades or reconfigurations. It's all in a single machine or virtual machine. Forescout, named as Gartner's head, offers real-time hazard reduction, can grant or block network access through automated policies and be integrated with existing security tools such as McAfee, Palo Alto, FireEye and much more to bridging remediation. Forescout can help with: Endpoint consistency – Control all connected devices, know what's on your network without your knowledge, sometimes without proper security controls. You may need the visibility of XP devices or to cross the connection code to access the public service network. Non-corporate devices – When guests, contractors, or staff bring their device to your location, they must remain productive, possibly access the Internet or additional resources, but their access must be limited without the risk of malware or compliance. Rogue devices – Good-looking employees can expand your network with cheap wired nodes and wireless access points. These devices can make your network unacceptable and may be a source of infection and data loss. Malware and botneti – Studies show that well-managed companies have also infected computers due to zero-day attacks and/or temporary antivirus virus. AV can only update devices it knows about. Forescout ControlFabric – a set of technologies that enable Forescout CounterACT and other IT solutions to share information and effectively mitigate a wide range of network, security and operational issues. As a result, you can squeeze out more utilization, efficient pre-empt and contain exposures, and increase overall safety from existing security investments. In a recent independent survey, 93% of current owners stated that the product is fulfilled or is of great help beyond their ROI requirements, 94% indicated that they might recommend it. To agree to discuss with one of our engineers call us now 01677 428700 or email info@fullcontrolnetworks.co.uk, and alternatively, see it on the manufacturer's website. Integrated apparatus. Forescout CounterACT includes everything in one machine. There is no software to install, nothing to configure. Built-in integration limits existing infrastructure, including contacts, switches, endpoint security systems, patch management systems, ticket sales systems and reporting systems. 802.1x or no. Forescout CounterACT can use 802.1x to authenticate and control the switch. Alternatively, you can avoid 802.1x limits and use Forescout's alternative technologies. It's your choice. Visibility. Forescout CounterACT's Asset Inventory provides real-time, multidimensional network visibility and control that allows you to track and control users, applications, processes, ports, external devices and more. Check-in guests. The automated forescout CounterACT process gives guests access to your network without compromising your internal network security. Forescout CounterACT includes several guest registration options that allow the guest accepting process tailored to the needs of your organization. Manage your mobile device in real time. Forescout CounterACT detects and controls manual mobile devices connected to a Wi-Fi network. Supports iPhone/iPad, Blackberry, Android, Windows Mobile, and Nokia Symbian. Hazard detection. Forescout CounterACT includes ActiveResponse™, a patented hazard detection engine that monitors the behavior of devices after connection. ActiveResponse blocks threats with zero self-reproduction and other types of malicious behavior. Unlike other approaches, ActiveResponse does not rely on signature updates to remain effective, which means low management costs. Log detection. Forescout CounterACT can detect roamable infrastructure, such as unauthorized switches and wireless access points, by determining whether the device is a NAT device, identifying whether the device is on the list of authorized devices, or detecting cases where the switch has multiple hosts connected to them. Role-based access control. Forescout CounterACT ensures that only real people with the right devices gain access to the right network resources. Forescout leverages your existing directory where you assign roles to user identities. Customizable control options. Unlike early-generation NAC products that employ heavy controls and disrupt users, Forescout CounterACT provides a full range of enforcement options that allows you to adjust the response to the situation. Low-risk infringements can be dealt with by sending a notification to the end user and/or automatically correcting his security problem; this allows the user to remain productive while the remediation takes place. Policy management. Forescout CounterACT allows you to create security policies that are appropriate for your business. Configure and is fast and easy thanks to the built-in forescout CounterACT policy wizard, and classification of devices, rules and reports. Non-reasent. Forescout CounterACT introduces an out-band that resolves latency issues and potential failure points on your network. Scalability. Forescout CounterACT has been proven in customer networks in excess of 250,000 endpoints. Forescout CounterACT appliances are available in different sizes to install networks of all sizes. An operation without clients. Because Forescout CounterACT is a solution without a client, it works with all kinds of endpoints, managed and unmanadated, known and unknown. Nothing escapes Forescout CounterACT. If it's on your network, Forescout CounterACT sees it. Optional client. Forescout CounterACT allows you to install a persistent or dissolvable lightweight client that gives you additional control over the end point. The client supports Windows, Mac, and Linux and can be automatically introduced when a user connects to a network and registers their identity on the system. integration of information infrastructure. Unlike its own NAC products, The Forescout CounterACT is fast and easy to install because it supports a wide range of third-party network and security hardware and software, including 802.1x switches and non-802.1x companies. Authentication. Forescout CounterACT supports existing authentication and directories based on standards such as 802.1x, LDAP, RADIUS, Active Directory, Oracle, and Sun. I'm not going to be Forescout CounterACT has a fully integrated reporting engine to help you monitor policy compliance levels, meet regulatory audit requirements, and prepare real-time stock reports. Compliance with endpoints. Forescout CounterACT can ensure that every endpoint in your network complies with your antivirus policy, is properly patched and is free of illegitimate software such as P2P. Forescout CounterACT is an automated security control platform that ensures visibility and control of all devices on the network in real time. Forescout CounterACT automatically identifies who and what's on your network, controls network access, measures compliance with security policies, blocks network threats, and fixes endpoint security breaches when they occur. CounterACT makes you smarter, the network more secure, and your staff less busy with automation tasks that are currently arduous. Add to the colaberation with existing security tools such as McAfee, Palo alto, FireEye, Mobile Iron and much more using their expanded modules to enable interoperability and confirmation of complete network security. Forescout CounterACT provides network access to employees, guests, and contractors without compromising your security. CounterACT shall be included in the current network, security and identity infrastructure to ensure that relevant users and their devices are able to obtain adequate access. Promoting embedded policy templates, counterACT can be automatically managed and guest access in a way that is flawless for those who are compliant and automated for those who do not. CounterACT is the most cutting-edge NAC solution on the market. Endpoint Compliance Forescout CounterACT for Endpoint Compliance automatically enforces security policies for everyone and everything on your network to help you reduce your security risks. Since Forescout CounterACT is free agents, it works with all kinds of endpoints, managed and unmanained, known and unknown, physical, mobile and virtual. CounterACT can detect security flaws with existing agent-based security systems that would otherwise go unnoticed. Literally, CounterACT can locate and eliminate endpoint violations without IT intervention – you save your organization a lot of time, resources and money. Prevent threat Forescout is a patented ActiveResponse™ is included in every product we sell. Forescout ActiveResponse blocks both known and unknown attacks with 100% accuracy. This unique technology does not require signature updates, nor does it suffer from false positives. And because it works with zero maintenance, you automatically get real-time protection within the network in full-blocking mode. Forescout CounterACT provided zero protection against Conficker, Zee and Stuxnet. Regulatory compliance reports and forescout CounterACT audit give you an intelligence and security posture in real time. Our platform is ed with leading network, security, host-based security systems (HBSS) and identity platforms to support compliance mandates. In addition, CounterACT supports leading security information management systems (SIEM) to provide details on endpoint configuration, access correlation and compliance violations, and to speed up response to incidents. CounterACT-built report templates help organizations monitor policy compliance levels, support regulatory audit requirements, and prepare real-time stock reports. Therefore, counterACT introduces GRC initiatives and reduces audit procedures. Forescout CounterACT mobile security provides transparency and control of smartphones, tablets, netbooks, and other corporate and personal mobile devices connected to the network. Our solution complements/enables wireless access points (WAP), virtual device interface (VDI), enterprise mobile platform (MEAP) and mobile device management (MDM). CounterACT can automatically identify and manage fingerprints and personal mobile devices that are employed by the facility or guests who use multiple devices, can eliminate rogue WAP and identify malicious network activity. With CounterACT mobile security, you can enable users to enjoy the productivity benefits of modern handheld devices while protecting your network from data loss and malicious threats. Forescout Difference Forescout CounterACT is dramatically lighter and faster for as traditional products for policy enforcement. Here's the reason: one box, box, day to install. It's all in one physical or virtual machine. Installation is easy with built-in configuration wizards: Forescout works with what you have: All existing switches, routers, firewalls, endpoints, patch management systems, antivirus systems, directories, ticket sales systems. Forescout CounterACT works with them. We do not need infrastructure changes or equipment upgrades. No software: Forescout CounterACT is free of agents, which means it works with all kinds of endpoints, managed and unmanadated, known and unknown, authorized and rogue. Client installation is not required. Unseasonable: Unlike the first generation of NAC products that immediately disrupt users with heavy access controls, Forescout CounterACT can be used in a phased approach that reduces disruption and accelerates results. In the initial phase, CounterACT allows you to be visible to your difficult sites. When you want to move forward with automated control, you can do it gradually, start with the most problematic locations, and choose the right executive action. Accelerated results: Forescout CounterACT offers useful results 1. The built-in knowledge base helps you quickly and accurately configure security policies. Exactly.
